VT3500-AI

INTEGRATED AI-POWERED 4G DASHCAM

The **VT3500-AI** is the most sophisticated AI-powered 4G dashcam, with a built-in driver-facing camera and panic alarm. The integrated device is a highly effective fleet risk management solution designed to prevent collisions and provide added safety insight through real-time video analysis of the road, vehicle, and driver.

The **VT3500-AI** uses the latest camera technology and advanced AI algorithms to pinpoint risk, alert drivers and keep fleet managers informed. The forward-facing camera detects potential dangers – forward collisions, lane departures, tailgating and pedestrians – while the driver-facing camera identifies risky behavior such as smoking, cell phone use, eyes not on road and fatigue.

The four-channel dashcam supports two additional cameras and a monitor. This means the device can include a combination of side, rear, in-cab and cargo cameras to provide added visibility of blind spots and other areas of interest.
