- Ability to work within a true Agile team with a BA, developers and Product Owners as part of a collaborative team to ensure Sprint goals are achieved
- Be responsible for planning, writing and creating test scripts in both manual and automation testing
- Develop, maintain and execute regression scripts for new and existing application suites
- Record test results, identify and analyse anomalies and where necessary raise and track defects with development team
- Ensure testing results are captured and test reports are shared with the respective stakeholders
- Assist with the provision of time and effort estimates for testing activities during a sprint planning
- Need to be proactive, result oriented, good oral and written communication and good team player
- Conduct post-release/post-implementation testing

Essential Skills:

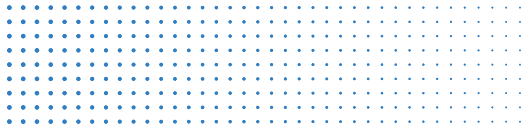

- Proven experience in quality assurance and testing
- Excellent knowledge of the Defect Management Process
- Experienced in writing manual and automated test scenarios, cases/scripts to desired levels of details
- Understanding of Selenium Automation (C#)
- Understanding of SQL Databases
- Strong knowledge of STLC, smoke testing, regression testing
