VT3600

Connected 2-Channel Forward-Facing Camera

The VT3600 is a connected dual-camera system – the forward-facing camera is for the driver's view of the road and the other channel can be used for either driver-facing or to record the side, rear or cargo view. The device supports dual-stream video recording – main stream (HD) and sub stream (SD) – allowing users to simultaneously preview and live stream in a data-efficient way, with full HD (1080P) video being available to download on request. An in-vehicle AHD monitor can be added for side, rear or cargo monitoring.

Dual Micro SD card storage (up to 512GB) offers approximately 36 hours of recording capacity based on 128GB in full HD (2x 256GB/72 hours recording in full HD & 144 hours of recording in SD). A built-in 100Hz G-shock sensor is able to detect poor driver behavior, helping fleet managers to improve road safety and reduce operational risk whilst removing false positives, such as speed bumps and potholes.

Key features:

- ✓ 2MP resolution with 143° FOV (forward-facing camera)
- ✓ 4G/LTE module
- ✓ Supports up to 2-channel video recording
- ✓ Dual Micro SD card storage
- ✓ Powered via OBD plug & play for easy installation
- ✓ Supports wake up on demand (power consumption less than 0.1W)
